

PROPOSED ENHANCEMENT OF TECHPEDIA 4.0 – AI-GUIDED CHAT BOT (POLICY & FAQ ASSISTANT)

1.0 System Background and Description

Credit Technical intend to enhance the existing Techpedia platform (<https://techpedia.smebank.com.my/>) through the implementation of AI-Guided Chat Bot (Policy & FAQ Assistant) integrated modules.

Techpedia currently operates as a web-based system. The proposed enhancements shall be developed as web-based solutions and fully integrated within the existing platform environment. No standalone application deployment is required.

2.0 System Scope

The vendor shall design, develop, integrate, test, and deploy the modules within the existing Techpedia system.

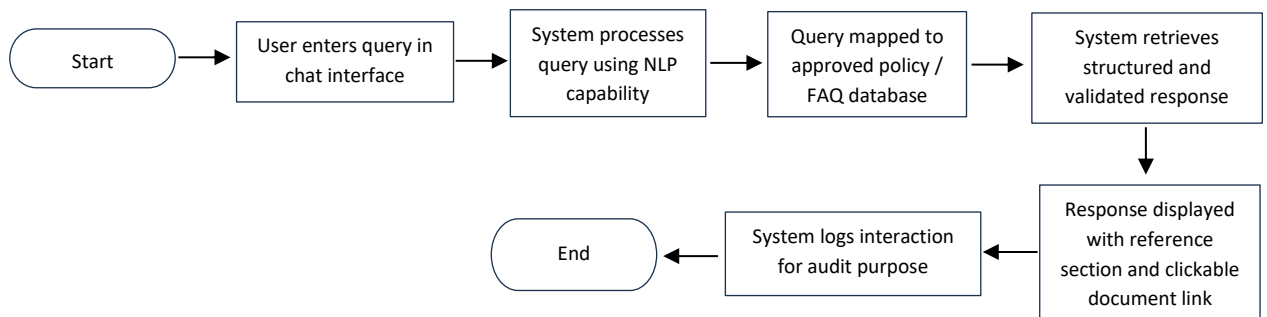

2.1 AI-Guided Chat Bot (Policy & FAQ Assistant)

a) Functional Requirements

The module shall include, but not be limited to:

- i. Integration within the existing Techpedia web-based platform.
- ii. Natural Language Processing (NLP) capability to interpret user queries related to Credit Technical policies and procedures.
- iii. Retrieval of responses from approved internal policy documents and selected FAQ database.
- iv. Structured and guided responses with reference to relevant document sections.
- v. Click-through links to full policy or procedural documents.

b) Process Flow

3.0 Software Requirements

- a) All modules shall be developed within the existing Techpedia web-based architecture.
- b) The solution must be accessible via the Bank's internal network infrastructure.
- c) The AI-Guided Chat Bot shall incorporate NLP capability within a controlled knowledge framework.
- d) The solution must comply with the SME Bank's IT security, data governance, and system risk management requirements.
- e) Vendor shall specify any software subscription, API usage, AI licensing, or Power BI licensing requirements.
- f) Vendor shall provide detailed technical architecture and integration approach.

4.0 Hardware Requirements

- a) The proposed enhancement is expected to leverage the Bank's existing server and infrastructure environment.

- b) Vendor shall specify if any additional hardware, server capacity, or infrastructure upgrade is required to support system performance, NLP processing, geographic mapping functionality, reporting functions or document storage.
- c) All hardware requirements shall be subject to assessment and confirmation by the IT Department prior to implementation.

5.0 Project Timeline & Expansions

Phase 1 – AI-Guided Chatbot (Policy & FAQ Assistant)

To be completed by end of 2026, incorporating basic AI functionalities as discussed, primarily to support policy reference and FAQ assistance.

Phase 2 – AI Chatbot with Search Functionality (Enhanced – 50%)

To be implemented in 2027, with enhanced capabilities including search functions based on specific criteria such as customer name, project type, and other relevant parameters. This phase will support retrieval of technical reports stored in the technical database (estimated 1,000 reports in PDF format).

Phase 3 – Full-Fledged AI Chatbot with Analytics Integration

To include full AI capabilities, including integration with Power BI for data analysis and insights derived from the technical database.
